INDUSENSE SYNTHETIC MAINTENANCE MANUAL (DISTRACTOR CORPUS)
DOCUMENT ID: SYNTH-MAN-CHUCK-018
TITLE: Pneumatic Chuck Clamp Calibration & Pressure System Manual
STATUS: SYNTHETIC DISTRACTOR -- SEMANTIC PROXIMITY FALLACY BENCHMARK

SECTION 2: WORKHOLDING PRESSURE EQUALIZATION
Pneumatic and hydraulic workpiece clamping fixtures maintain workpiece concentricity. Ambient air pressure and low-velocity cycling require calibration checks.

SECTION 5.4: LOW-SPEED AIR PRESSURE REGULATION
When ambient air delta falls below threshold during low-speed tooling cycles, clamping force decay may occur. Technicians must inspect pneumatic line PL-04, adjust regulator valve RV-204, and recalibrate chuck hydraulic clamps to 45 bar before spindle restart.

NOTE: This procedure applies strictly to workpiece retention chucks and has NO relation to spindle motor stator cooling.
